How to play

RULES

1. The hidden word has 4 letters, written as ASCII hex: 2 digits per letter.
2. Guess 8 hex digits that spell a real 4-letter word.
3. Each digit turns **blue** right spot, **orange** wrong spot, or **grey** not in the word.
4. After each row you get one try to type the English word. Fewer rows is a better score.
5. After 6 rows the hex locks and you get one final answer.
6. Stuck? Turn on **Hints** to see the letters you have fully decoded so far.

ASCII CHEATSHEET

4_ is A–O, **5_** is P–Z. The second digit counts up from there.
